

## Installing the V9360W Cameras to the V9360-2MK

When installing the V9360W-6 or V9360W-12 panoramic outdoor cameras to the V9360-2MK pendant mount, it is critical to make sure that the camera installation remains watertight. After the camera connections are completed and the camera is secured back into the mount, a bead of silicone sealant should be applied around the entire seam where the camera base meets the pendant mount to prevent water entry. It is recommended to use Loctite SI 595. Refer to Figure 1 below.

Figure 1

Place a small amount of silicone sealant into the seam between the two parts. Be sure to cover the entire circumference. Carefully wipe off any excess sealant.

Go to the Vicon [website](#) to find the latest manual for the camera.
