

How to Leverage Vicon's New LPR Cameras to Unify Your Video Surveillance Operation

Q&A

Q – When will these cameras be available?

A – We expect these cameras to be available early August.

Q – Are the cameras in stock?

A – Yes, we have very good stock levels of this camera and the majority of the full line of Roughneck and Roughneck Pro cameras as well. Once the final camera firmware is approved, it will be loaded onto these cameras and we will make them available for purchase. Early orders are also being accepted.

Q – When will I be able to search for specific plates in Valerus?

A – Currently we plan to add this capability with Valerus version 22.2. If we happened to have it available sooner, we will release it at that time. In the meantime, you can search for specific plates via the camera's browser.

Q – Can I use a larger microSD card than the provided 32GB microSD?

A – Yes, Class 10 microSD cards up to 128 GB are supported.

Q – Can I receive a mobile alert about LPR events?

A – Yes, if an LPR event is being used to trigger an alarm, the alarm can be programmed to perform additional actions, such as sending a Mobile Push Notification, toggling an output and more.

Q – Is a microSD card included with the cameras or do I have to purchase my own?

A – Yes, a 32 GB microSD card is included with the cameras that meets the requirements for the cameras to save LPR event data correctly.
