IP Utility Release Notes

Product: IP Utility

Version: v3.5.25 (build 100401)

Release Date: April. 29, 2010

Latest update:

Enhancement

1   Add the "Authentication Failed" in the camera profile field to indicate the account name and password are incorrect to get the camera profile ID.

2   Add the "Camera Profile Refresh" tab to read the camera profile ID for selected camera. No device search action is taken when Camera Profile Refresh is performed.

3   Show the model description if it is available in the device discovery reply message from the device. If it is not available, the internal database is used.

4   Update the Product Map database for new camera models

5   Compatible to new platformA firmware 3.12 and platformT firmware 4.07

Modification

1   Close symbol「+」 to backup/restore configuration of router. Open symbol「+」 to backup/restore configuration of server(channel).

2   Check firmware version, profile ID (EPL, Platform T) / NTSC/PAL(Platform W) to restore camera or video server(channel)

3   Check router version, profile ID (EPL, Platform T) / NTSC/PAL(Platform W) to restore router

4   Change the wording of "Clean Status" to "Clean Check Box"

5   Only root account could perform configuration restore and firmware/camera profile upgrade.

Limitation

1.   Profile pack upgrade only supported by:

    A.   Platform T: FW version v4.06.09 or above

    B.   Platform A IP camera: FW version v3.09.14 or above

    C.   Platform A video server: FW version v3.11.11 or above

2.   Only Platform T and Platform A support camera profile pack upgrade

3.   Please do not power off or reboot your device when upgrading firmware

4. Only device discovery supports in the decoder and CAM-xxxx camera. The rest functions of IP Utility should not be used.
